**KEY PROJECTS** [<http://unmeshdeolekar.com/portfolio> ]

**NextMsg** <http://nextmsg.net/>  
 NextMsg is a platform used to connect businesses and their customers via text messaging. Designed and developed the NextMsg web application using tools like Twilio and SendGrid to facilitate an alternative method for placing orders, by customers. – MySQL, PHP, Ajax, Twilio, SendGrid

**March Of Dimes** [https://www.facebook.com/WorldPrematurityDay/app\\_470151973005284](https://www.facebook.com/WorldPrematurityDay/app_470151973005284)  
 Developed a Facebook/Google Maps application to collect testimonials from parents from multiple countries who have faced the problem of having a premature baby. Once the story is submitted; using the zip code and the Google geocoding API, a pointer is made on the Google map, so that the story is available to others. – MySQL, PHP, Google API

**BKV Company website** <http://www.bkv.com/>  
 BKV is a full service digital media agency. Co-designed, developed and maintained the BKV website using ExpressionEngine CMS.

## SportsDeck

<http://sportsdeck.biz>

SportsDeck is a premier Sports League Automation platform that can be used to manage all aspects of league management, team uniform ordering, scheduling and player registration. Led client facing communication. Designed and developed the entire SportsDeck system, interfaced it with Magento and an ERP solution to facilitate end-to-end functionality for retail manufacturers and sports team managers.

– MySQL, PHP, ExtJs and AJAX.

In addition, I had the opportunity to play multiple roles including:

- *Business Analyst* - Documentation of requirements, test scenarios and cases.
- *Technical Lead* - Led a team of five developers guiding them with design validations, code review and task management.
- *Infrastructure Consultant* - Played key role in setup of the application environment using GIT, Code Base and Deploy on Rackspace cloud environment.
- *UI/UX Designer* - Developed user interfaces using ExtJS.

## Workforce-Velocity Web-application

<http://workforce-velocity.com/>

Workforce-Velocity is a SaaS-based complete suite of products to manage time and attendance, workforce planning, labor cost control, scheduling, talent file management, automated bi-directional communication and performance management—quickly, strategically and from anywhere you place your computer.

Developed payroll modules, employee management modules and help center module. Also, designed both the front-end and back-end for the Time keeper Kiosk – MySQL, OOPHP, AJAX, XML and JQuery.

## Fresh 'n Fit Cuisine

<https://freshnfitcuisine.com/>

Fresh 'n Fit Cuisine™ revolutionizes the food ordering process making healthy eating easy with fresh dietitian approved meal plans. Along with developing the testimonial and report modules, developed the Pickup Locations and Pricing module using Google Maps and Google geocoding. This helps customer find the nearest pickup location, choose the best meal plan and then conveniently link it to the checkout process.

– MySQL, PHP, Google API, Codeigniter

## WorkReadyGrad

<http://50.56.196.240/>

WorkReadyGrad helps students streamline the process of determining their career path, engaging the most relevant resources on and off campus, and landing their first job/internship. Designed and developed the Corporate site using Wordpress and the web application using PHP, MySQL and Foundation Framework making it responsive; displaying the best of my UX skills.
